

Introducing Industry-leading Mobile Deposit Security Features*

We've enhanced our personal checks with powerful and important new security and anti-fraud features that provide an additional layer of protection against fraud associated with mobile deposit capture, the most sought-after mobile banking feature among consumers.†

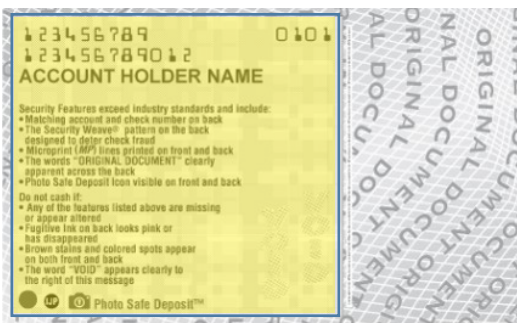

Mobile Deposit Security Features

Photo Safe Deposit™ Icon

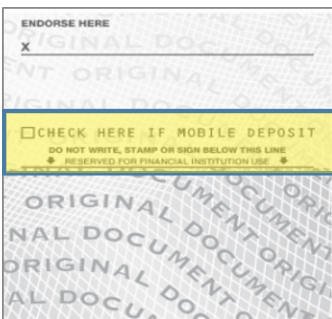

Our new **Photo Safe Deposit icon** replaces the padlock icon. When you see the Photo Safe Deposit icon, you can be confident that the checks offer mobile deposit fraud prevention features, along with all the other security features that the padlock icon represents.

ImageMatch™

ImageMatch helps prevent multiple uses of a check's endorsement. With ImageMatch, the routing number, check number, account number and first line of personalization are printed on both sides of the check, providing visual verification that the back image and front image belong to the same check.

MobileMark™

When checked, the **MobileMark box** serves as a visual reminder that a check has already been deposited and helps avoid unintended duplicate deposits of the same check.

* Features are available on select personal checks only.
